Why Gaia's?

The [Gaia hypothesis](#) [2] is an ecological hypothesis that proposes that living and nonliving parts of the earth are viewed as a complex interacting system that can be thought of as a single organism. Named after the Greek earth goddess, this hypothesis postulates that all living things have a regulatory effect on the Earth's environment that promotes life overall.

Why Memes?

?noun

a cultural item that is transmitted by repetition in a manner analogous to the biological transmission of genes.
